

Marking feedback, at the speed you can say it.

Your markers talk through a piece of work the way they'd talk to a colleague. Markaloud transcribes it, sorts it against your rubric, and produces structured, consistent feedback — ready for the marker to approve. Nothing reaches a student until they do.

HOW IT WORKS

1	2	3
Mark by talking	AI structures, never judges	Marker approves, student receives
Markers speak while reading — a dissertation, an essay, a lab report, a reflective assignment, a final-year project. No templates, no second typing pass.	Speech is transcribed and organised against your assessment criteria: strengths, weaknesses, actions, per criterion. The grade and the judgement stay with the marker.	The marker reviews, edits and signs off. Students get fuller, more consistent feedback than time usually allows.

Any discipline. Markaloud is rubric-driven rather than subject-specific, with templates for essays, reports, dissertations, lab reports and presentations — or import your own from Excel, Word or Canvas. Departments currently piloting span engineering, business, nursing, psychology and education.

THE AUTUMN PILOT

WHAT Full Markaloud access for your department for the autumn marking period	COST Free. No purchase order, no procurement. If it isn't working, stop using it.	MARKERS Up to 20, onboarded by us in a 30-minute session
TERM September – January marking	YOU COMMIT TO A named contact, and 30 minutes of honest feedback at term end	AFTER THE PILOT If it earned its place: institutional plans from £1,950/year (20 markers). If not, your data is exported and deleted on request.

“You mark. AI structures. You approve.”

WHY DEPARTMENTS RUN IT

- Marking time falls where it hurts most — **long-form written work** and project reports.
- Feedback becomes **consistent across markers** and legible to external examiners.
- A **defensible AI position** for your teaching committee: AI never grades, never sees work unsupervised, every step audit-logged.
- Dictation removes a real barrier for markers with **dyslexia, RSI or a visual impairment**.
- Works alongside Canvas; no change to your marks process.

GOVERNANCE, ANSWERED UP FRONT

UK GDPR	Compliant, with a signed Data Processing Agreement before any student work is touched.
AI training	Never. No student work is used to train any model, contractually, by any provider we use.
Where data sits	Student work is stored in the UK . Transcription and structuring are carried out by named sub-processors in the US under a UK transfer agreement. The full list is published and named in the DPA.
Marker control	The AI never grades. Nothing reaches a student without marker approval.
Audit & exit	Every step logged. Export and deletion on request, at any time.
